Subject Relationship between orders & sessions

Description of Problem or Suggestion:

The current design would prevent filling a user's order (e.g., for on-demand products, products on media, etc) if the user suspended their session before all the pieces of their order become active. Any inactive portions of the order would also be suspended. This is a problem.

Originator's Recommendation

Orders need to be treated differently from search or other services. Once placed and acknowledged by the system, an order should be independent of the user's sessions. A session which becomes suspended should not prohibit a submitted order from being processed.
